#### ABSTRACT OF THE DISCLOSURE

A problem is to propose a network error display apparatus and an error detection display method capable of displaying a user's measure intelligibly while making a distinction between an error of the receiving system on the network and an error within a device. *The* network error display apparatus includes: an IEEE 1394 signal processing section (4) for detecting an error of a loop state in an IEEE 1394 network, detecting a link state, detecting an error which occurs in such a state that there is a link for the network or an error which occurs in such a state that there is no link for the network; a main body processing section (5) for storing messages indicating error states and conducting display processing on messages stored on the basis of an error state; and a display section (6) for displaying a message for a user. Therefore, a user's measure is displayed intelligibly while making a distinction between an error of the receiving system on the network and an error within a device.
